

Zen

JIRA SERVICE MANAGEMENT

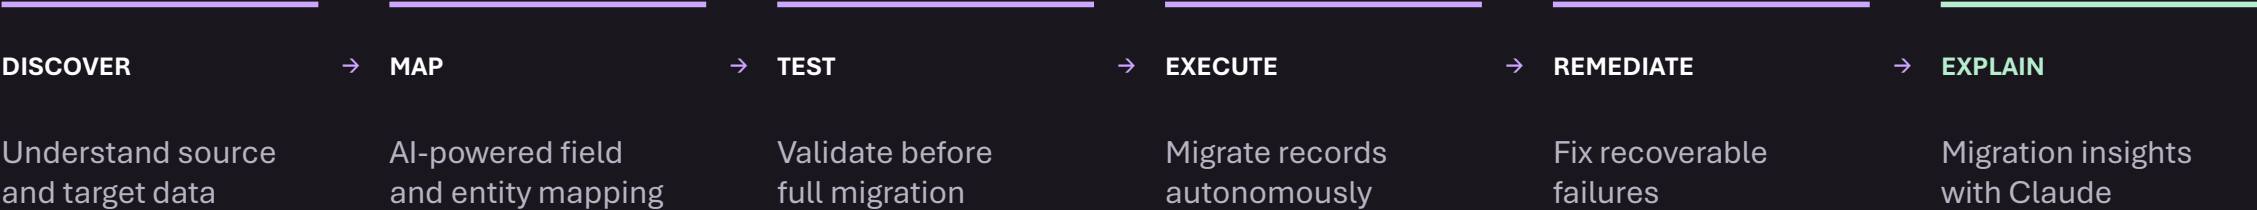

Freshservice

The Autonomous Enterprise Migration Agent

From manual migration projects to goal-driven, intelligent migration.

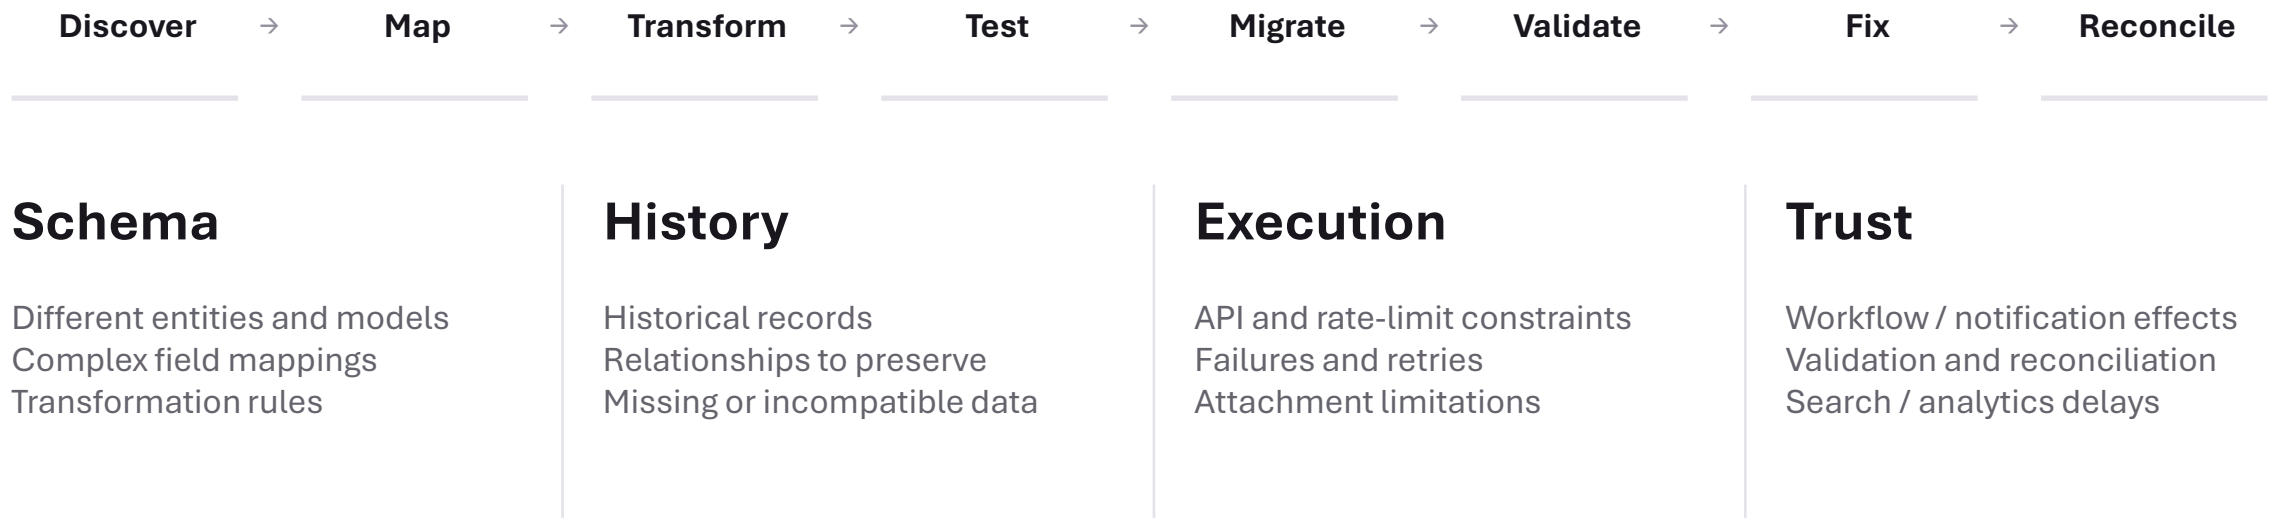

Give Zen the goal. It manages the migration and brings in humans only when needed.

From "Can we migrate?" → "Zen knows we're ready."

Enterprise migration is more than moving data.

Changing ITSM platforms means preserving meaning, relationships and operational trust.

Freshservice migration documentation identifies API constraints, side effects, attachment limits and indexing delays.

The hard part is making migration safe, complete and trustworthy.

APIs + scripts + specialists + troubleshooting → An agent that manages the workflow

The technology is ready for agentic migration.

The integration foundation exists. The next step is intelligent orchestration.

01

Migration is still high-touch

Customized implementations and historical data make migration more complex.

02

The integration layer is ready

Freshservice REST API v2 plus Product MCP, with Claude client support.

03

Confidence is already expected

Mapping, test migrations, validation, delta migration and specialist assistance.

04

AI can own the workflow

Reason across the journey. Take routine actions. Escalate uncertainty.

TRADITIONAL

API → Script → Import → Human troubleshooting

AGENTIC

Goal → Discover → Reason → Map → Test → Execute → Remediate → Explain

Not another migration script. Confidence before, during and after migration.

Zen turns migration into a confidence-based workflow.

Test first. Execute when ready. Recover what is safe. Explain what remains.

THE GOAL

"Migrate all employees and tickets from Jira Service Management to Freshservice."

01 / DISCOVER

JSM: customers + tickets
Freshservice: requesters,
tickets, departments,
workspaces

→ 02 / MAP

Customer → Requester
Ticket → Ticket
Department → Workspace
Priority / Status → same

→ 03 / TEST

Controlled sample migration
Validate before cutover

→

04 / ASSESS READINESS

Migration Readiness: 96%

- ✓ Required fields ✓ Mapping
- ✓ Workspace classification
- ✓ Test migration ✓ Validation

READY TO PROCEED

→ 05 / EXECUTE

Run the full migration
with validated mappings

→ 06 / REMEDIATE

Detect → Diagnose
Fix → Retry

→ 07 / RECONCILE

Compare source vs target
Identify remaining exceptions

→

08 / EXPLAIN

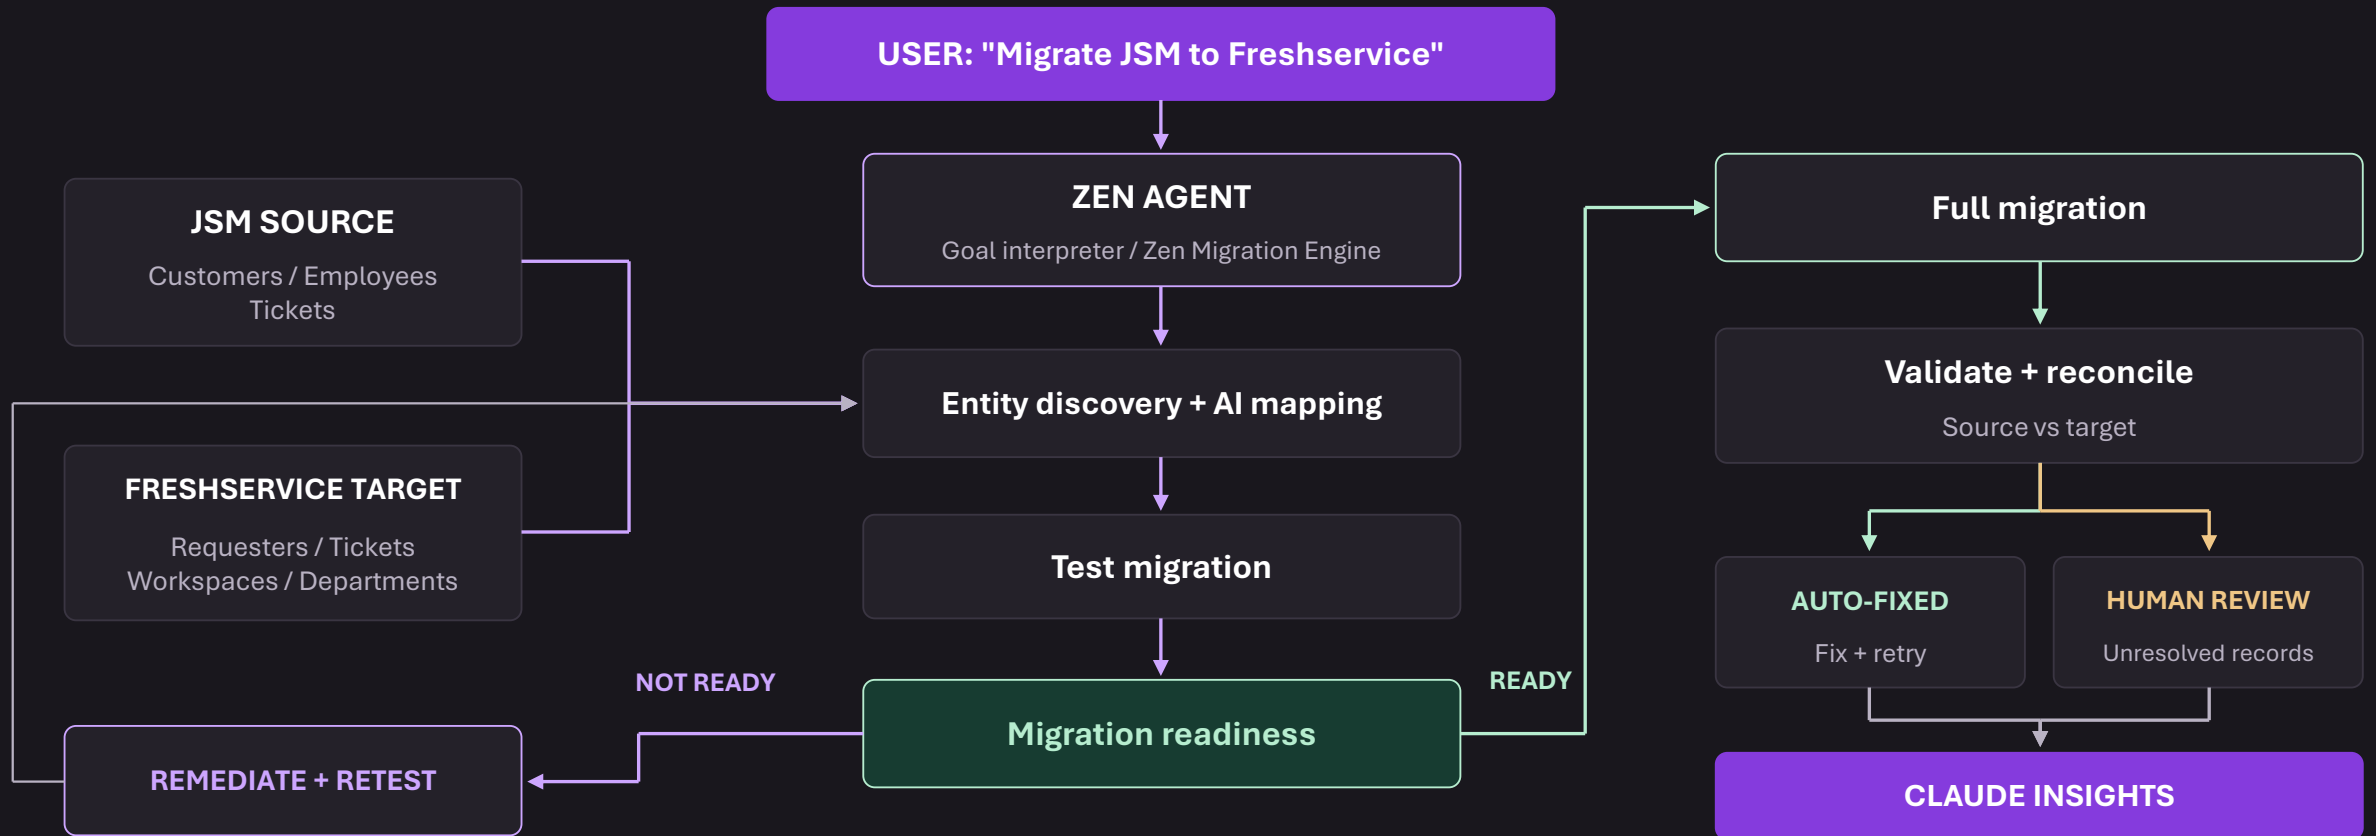

Claude summarizes outcomes,
fixes and open issues

Automate where confidence is high. Escalate where judgment is required.

Readiness score shown is an illustrative example.

From natural language → autonomous execution

Proposed architecture / A readiness gate and an explicit human-review path.

One goal. End-to-end migration.

Illustrative walkthrough / Jira Service Management to Freshservice

"Migrate all employees and tickets from JSM to Freshservice."

ZEN DISCOVERS

Customers + tickets → Requesters + tickets
Workspaces and departments discovered

ZEN MAPS

42 fields: 36 high-confidence
5 medium-confidence / 1 requires review

ZEN TESTS

100 records: 98 passed + 2 auto-fixed

0 critical errors → **MIGRATION READY**

ZEN EXECUTES

10,000

records in this example

96.5%

first-pass success

- Successfully migrated first pass 9,650
- Automatically remediated 280
- Human review 70

99.3% migrated after remediation

CLAUDE / WHAT WENT WRONG?	WHAT ZEN FIXED	WHAT REMAINS
Missing requester information.	Reliable email matches + department values.	70 records without a reliable requester match.

From migration execution → migration autonomy

A goal-driven operating model, with people involved where judgment matters.

MANUAL / SCRIPT-LED WORKFLOW	ZEN
Human defines every step	User defines the goal
Manual schema discovery	Automatic discovery
Manual field mapping	AI-assisted mapping
Import and hope	Test before full migration
Monitor failures manually	Agent detects failures
Manually troubleshoot	AI remediation + retry
Manual reconciliation	Automated reconciliation
Human involved throughout	Human only for exceptions
Static migration report	Claude-generated insights

Automate where confidence is high. Escalate where judgment is required.

Migration providers already offer mapping, tests and validation. Zen brings them together in one goal-driven agent.

Accelerate customer time-to-value.

For enterprise customers adopting Freshservice.

Faster

Automate repetitive migration work.

Safer

Test, validate and reconcile before and after migration.

Autonomous

Handle routine failures and recovery automatically.

Human-controlled

Escalate uncertainty and critical issues.

PRIMARY USERS

IT administrators / Onboarding teams / Professional Services / Migration teams

MVP SUCCESS TARGETS

≥95%

Migration success rate

≥80%

Recoverable failures automatically remediated

<10%

Records requiring human intervention

0

Duplicate records

Target metrics for the MVP. Not claimed achieved results.

From Migration Project to Migration Agent

TODAY

People manage every step.

Configure → Map → Script → Test
Migrate → Troubleshoot → Validate

WITH ZEN

"Move JSM to Freshservice."

Discover → Map → Test → Execute
Remediate → Reconcile → Explain

Human only when needed.

Give Zen the goal. Let Zen own the migration.
