

JIRA SERVICE MANAGEMENT → FRESHSERVICE

Zen

The Autonomous Enterprise Migration Agent

From manual migration projects to goal-driven, intelligent migration.

From “Can we migrate?” → “**Zen knows we’re ready.**”

THE PROBLEM

Enterprise migration is more than moving data

The hard part isn't moving records from A to B. It's making migration safe, complete and trustworthy.

Source: Freshservice migration documentation cites rate limits, API flexibility, notifications, workflow execution, attachments and search/analytics delays.

The technology is ready for agentic migration

01	02	03	04
Migration is still high-touch	The integration layer exists	Confidence is the benchmark	AI changes the operating model
Complexity rises with customization and historical data	Freshservice REST API v2 + Product MCP, with Claude support	Vendors lead with mapping, test runs, validation and delta migration	From scripted steps to goal-driven agents

Not another migration script. Confidence before, during and after migration.

THE SOLUTION

Zen turns migration into a confidence-based workflow

USER GOAL

“Migrate all employees and tickets from Jira Service Management to Freshservice.”

Readiness score shown is illustrative.

From natural language to autonomous execution

One goal. End-to-end migration.

 “Migrate all employees and tickets from JSM to Freshservice.”

Claude explains

WHAT WENT WRONG?

Missing requester information was the primary failure category.

WHAT DID ZEN FIX?

Matched existing requesters by email and normalized known department values.

WHAT REMAINS?

70 records need human review — no reliable requester match was found.

WHAT MAKES ZEN DIFFERENT

From migration execution to migration autonomy

Existing tools prove mapping, test runs and validation work. Zen unifies them in one goal-driven agent.

TRADITIONAL APPROACH		ZEN
Human defines every step	→	✓ User defines the goal
Manual discovery & field mapping	→	✓ Auto-discovery + AI mapping
Import and hope	→	✓ Test before full migration
Monitor & troubleshoot manually	→	✓ AI detects, fixes & retries
Manual reconciliation	→	✓ Automated reconciliation
Human involved throughout	→	✓ Human only for exceptions
Static migration report	→	✓ Claude-generated insights

THE ZEN PRINCIPLE

Automate where confidence is high.

Escalate where judgment is required.

Zen acts

People decide

Accelerate customer time-to-value

Faster

Automates repetitive migration work

Safer

Tests, validates and reconciles before and after migration

Autonomous

AI handles routine failures and remediation

Human-controlled

Escalates uncertain or critical issues

MVP SUCCESS TARGETS

≥95%

Migration success rate

≥80%

Recoverable failures auto-remediated

THE VISION

From migration project to migration agent

TODAY
People run every step

WITH ZEN
People set the goal

Give Zen the goal. Let Zen own the migration.
